

Essential® Plus

Fertilizer & Soil Amendment

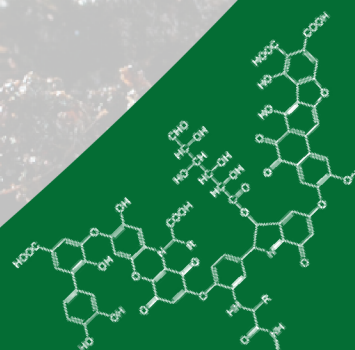

Product Description

Essential® Plus is a soil amendment that delivers effective microbial stimulation, improving soil health and plant growth. Formulated for all types of soils, Essential® Plus contains organic building blocks such as proteins and humic acid; components not found in typical N-P-K fertilizers. These components also provide food for beneficial microbes which help alleviate soil compaction and replenish soils.

Features

- Feeds beneficial microbe populations
- Aids in plant nutrient absorption through enhanced microbial vitality
- Increased nutrient absorption resulting in greater root & shoot growth
- Develops carbon rich soils
- Boosts plant vigor in greenhouse, landscape, & turf
- 30+ years of proven performance

Humic Acids

Organic compounds that:

- improves cell wall permeability
- increases microbial activity
- reinforces nutrient absorption
- enhances drought tolerance

Application Methods

Please see product label for instructions and recommendations for application methods.

Vicarage Road Stadium Watford, England

The Breakdown

Humic Acids

beneficial impact on microbial diversity and soil building

Seaweed Extract

provides nutrients to soil for plants, supporting root formation

Organic Carbon

works to better soil tilth and structure

Sugars

energy source for microbes

Corn & Fish Hydrolysate

increases soil fertility by providing amino acids & vital nutrients for plants and the soils microbiome
